From deliberation to action

Using deliberative processes
to address wicked problems

Québec 

Welcome!

Governments must tackle wicked problems.

e.g. health inequalities, obesity, climate change, bed bugs....

How can we tackle such
'wicked problems'?

We need mechanisms...

1. To develop a shared understanding of wicked problems
2. To better understand what works and in what context
3. To reach agreement and trigger action

Today's presentation

Part 1. What is a 'wicked problem'? [15 minutes]

Part 2. What is a 'deliberative process'? [40 minutes]

- ✓ Two deliberative trends
- ✓ Deconstructing 'deliberative processes'
- ✓ Two examples

Part 3. Debate – Deliberative processes lead to better policy-making [25 minutes]

Short break [20 minutes]

Part 4. Activity – Mapping an issue[40 minutes]

Part 5. Wrap-up & needs assessment [10 minutes]

Part 1

What is a 'wicked problem'?

Fragmenting Forces

- Wicked problems
- Social complexity
- Technical complexity

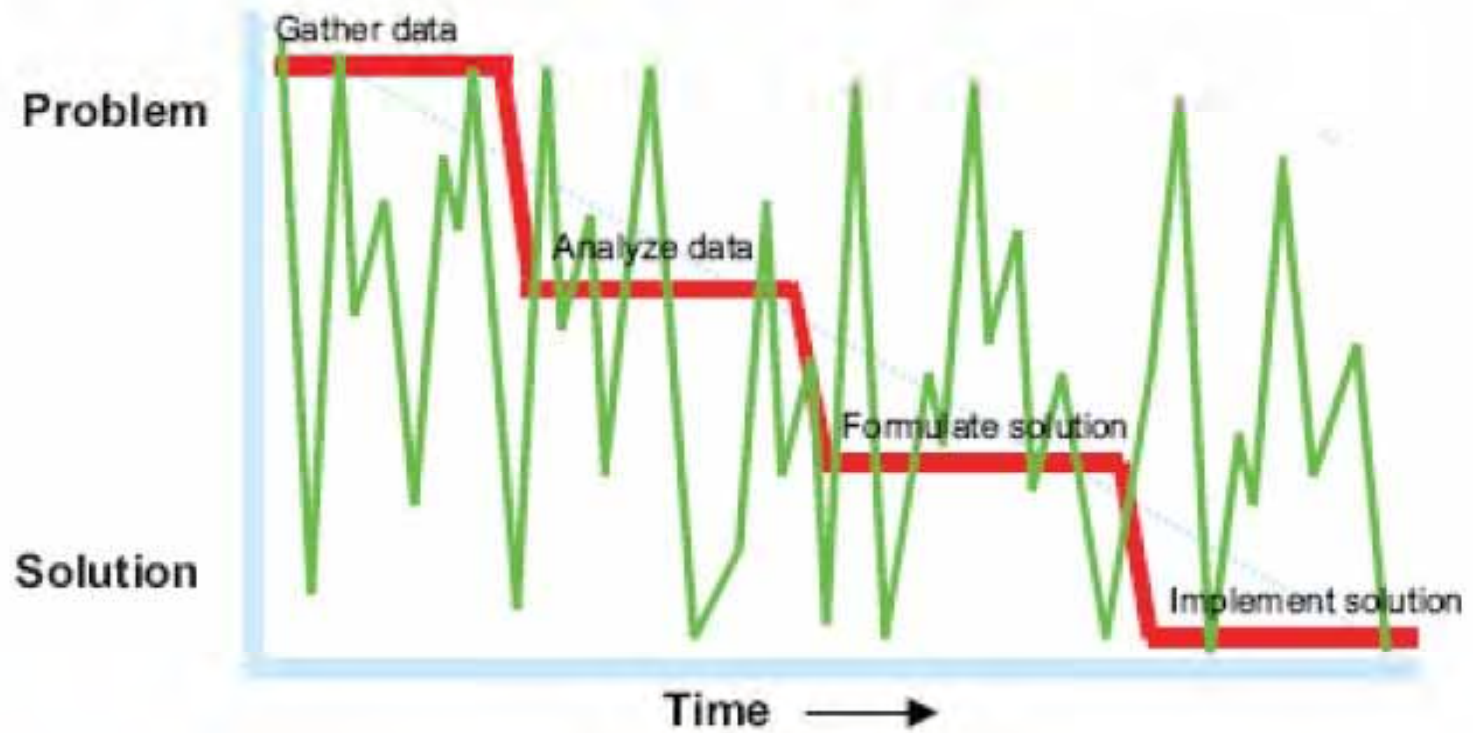

(Conklin, J., 2006. Dialogue Mapping: Building Shared Understanding of Wicked Problems. USA: Wiley.)

Traditional /Linear problem solution

(Conklin, 2006 p.9)

Opportunity-based problem solution

(Conklin, 2006 p.10)

Wicked Problems

- You don't understand the problem until you have developed a solution.
- Wicked problems have no stopping rule.
- Solutions to wicked problems are not right or wrong.
- Every wicked problem is essentially unique and novel.
- Every solution to a wicked problem is a "one-shot operation."
- Wicked problems have no given alternative solutions.

(Conklin, 2006 p.14-15)

Tame Problems

- Have a well-defined and stable problem statement.
- Have a definite stopping point, i.e. when the solution is reached.
- Have a solution which can be objectively evaluated as right or wrong.
- Belong to a class of similar problems which are all solved in the same similar way.
- Have solutions which can be easily tried and abandoned.
- Come with a limited set of alternative solutions.

(Conklin, 2006, p.9)

- Tame Problems

- New employee
- Municipal sewage system
- Space travel

- Wicked problems

- Obesity
- Health inequalities
- Social planning problems
- ... most policy issues

Taming wicked problems

- « attempting to tame a wicked problem, while appealing in the short run, fails in the long run. » (Conklin, 2006, p.22)

Tools for resolving wicked problems

- Cognexus Institute
 - Issue/Dialogue Mapping
 - IBIS (Issue-Based Information System)
 - A structure for rational dialogue among several stakeholders (Conklin, 2006, p.15)
 - Compendium
- Issue mapping and deliberative dialogue

Part 2

What is a 'deliberative process'?

Have you ever participated in a deliberative
process?

How do you recognize a deliberative
process when you see one?

ABSTRACT

Getting evidence into policy is notoriously difficult. In this empirical case study we used document analysis and key informant interviews to explore the Australian federal government's policy to implement a national bowel cancer screening programme, and the role of evidence in this policy. Our analysis revealed a range of institutional limitations at three levels of national government: within the health department, between government departments, and across the whole of government. These limitations were amplified by the pressures of the 2004 Australian federal election campaign. Traditional knowledge utilisation approaches, which rely principally on voluntarist strategies and focus on the individual, rather than the institutional level, are often insufficient to ensure evidence-based implementation. We propose three alternative models, based on deliberative strategies which have been shown to work in other settings: review of the evidence by a select group of experts whose independence is enshrined in legislation and whose imprimatur is required before policy can proceed; use of an advisory group of experts who consult widely with stakeholders and publish their review findings; or public discussion of the evidence by the media and community groups who act as more direct conduits to the decision-makers than researchers. Such deliberative models could help overcome the limitations on the use of evidence by embedding public review of evidence as the first step in the institutional decision-making processes.

Introduction

Getting evidence into policy and practice is harder than the rhetoric suggests. For example Paterson (2006) states that in Britain "much of the recent governmental head-nodding to evidence-based policy is mere lip service" (p. 175), while in Australia, Banks (2010) notes "The truth is, that while there has been much talk about evidence-based policy, far less attention has been paid to how we actually go about it and how we might do it better" (p. 3). The role of evidence in policy-making is complex, and even the definition of evidence is contestable (Dobrow, Goel, & Upshur, 2004; Head, 2008). Majone (1989) argues that "evidence is not synonymous with data or information. It is information selected from the available stock and introduced at a specific point in the argument in order to persuade a particular audience of the truth or falsity of a statement" (p. 10). This definition raises questions about who determines what information is considered as evidence, on what basis these decisions are made, and how evidence is actually used in the decision-making process. Policy emerges from the interaction of different forms of evidence, filtered and shaped by the institutional processes of decision-making. Head (2008) argues that evidence is perceived through three distinct lenses: systematic or scientific research, drawing on knowledge from different disciplines; programme management experience or practice, based on organisational knowledge; and political judgement, involving persuasion, strategising and building coalitions of support. In contrast, for Lin (2003) policy is formed out of the competition between three rival rationalities: the technical, based on the formal scientific assessment of evidence; the cultural, focusing on the values and ethics of participants in the policy process; and the political, concerned with power sharing and the creation of legitimacy. Both views break with any linear notion of knowledge utilisation and emphasise how policy-making is the management of rival value sets and notions of evidence. This conflict is channelled and managed through institutions, such as the legislative, judicial and executive arms of

CHSRF(2006) on ‘deliberative processes’

“A deliberative process is a tool for producing guidance based on heterogeneous evidence. It is a participatory process that includes representation from experts and stakeholders, face-to-face interaction, criteria for the sources of scientific evidence and their weight, and a mechanism for eliciting colloquial evidence while making it subsidiary to the science.”

Move away from traditional KT strategies to...

- Increase interactions between knowledge producers and users
- Contextualize scientific evidence
- Improve the quality of policy-making by tapping in experts', decision-makers', and civil society's knowledge

In sum, a deliberative process...

1. A group of person who meet face-to-face and/or virtually
2. Receive and exchange information about an issue
3. Critically examine the issue, and
4. Achieve a rationally motivated agreement

Addressing Housing Challenges Faced by
People with HIV in Ontario

Stakeholder Dialogue
1 June 2019

The McMaster Health Forum convened a stakeholder dialogue on the subject of addressing housing challenges faced by people with HIV. With the support of the Ontario HIV Treatment Network, the dialogue brought together participants - two policymakers, one manager from a health region, five housing providers, two representatives from AIDS service organizations, one representative from a healthcare organization, four researchers/research funders, and two other stakeholders - from across Ontario to examine the problem, options for addressing it, and how to determine effectiveness.

The stakeholder dialogue was facilitated by Dr. Jennifer Hladik, a senior research advisor at the Canadian Institutes of Health Research (CIHR), through a Meaning, Planning and Implementation grant to the Ontario HIV Treatment Network (OHTN). OHTN receives core operating funding from the Ontario Ministry of Health and Long-Term Care through the AIDS Fund. The event was supported in the dialogue management by the team of the Centre for Health Equity Promotion (CHEP) at the University of Toronto, and supported by various agencies of CIHR, OHTN and the Ministry.

Deliberation about the problem

Despite geographic, race, gender, population, income, and other differences, the available research evidence, the Ontario HIV strategy to end and interrupt HIV transmission, and the housing challenges faced by people with HIV are similar. Differences of opinion tended to be about the magnitude of the housing challenge faced by people with HIV compared to, for example, people with hepatitis C, and about what other conditions, such as the availability of social housing, could be done to provide housing, income and other forms of care and support to the people who are and will be most vulnerable to HIV. The dialogue was facilitated by Dr. Jennifer Hladik, a senior research advisor at the Canadian Institutes of Health Research (CIHR), through a Meaning, Planning and Implementation grant to the Ontario HIV Treatment Network (OHTN). OHTN receives core operating funding from the Ontario Ministry of Health and Long-Term Care through the AIDS Fund. The event was supported in the dialogue management by the team of the Centre for Health Equity Promotion (CHEP) at the University of Toronto, and supported by various agencies of CIHR, OHTN and the Ministry.

The Stakeholder Dialogue

- Organized in 2010 by the McMaster Health Forum, with support from the Ontario HIV Treatment Network, CIHR, and MOHLTC

Overarching objective

- Examine issues that make it difficult to provide services that meet the housing and health needs of people with HIV/AIDS, 3 options for addressing these issues, and key implementation considerations

4-step process

1. Preparatory consultations to frame and characterize the problem and three possible policy options to address it
2. Before the event, prepare and circulate an evidence brief that mobilizes relevant research evidence
3. 15 to 18 officials, leaders, citizens and researchers are convened for an off-the-record dialogue (Chatam House Rule)
4. After the event, prepare and circulate a dialogue summary

Let's watch a
testimonial...

Addressing Housing Challenges Faced by
People with HIV in Ontario

Stakeholder Dialogue
1 June 2010

The McMaster Health Forum convened a stakeholder dialogue on the subject of addressing housing challenges faced by people with HIV. With the support of the Ontario HIV Treatment Network, the dialogue brought together participants – two policymakers, one manager from a health region, five housing providers, two representatives from AIDS service organizations, one representative from a healthcare organization, four researchers/research funders, and two other stakeholders – from across Ontario to examine the problem, options for addressing it, and key implementation considerations.

The stakeholder dialogue and the issue brief that informed it were funded by the Canadian Institutes of Health Research (CIHR), through a Meetings, Planning and Dissemination grant to the Ontario HIV Treatment Network (OHTN). OHTN receives core operating funding from the Ontario Ministry of Health and Long-Term Care through the AIDS Bureau. The views expressed in the dialogue summary are the views of the author and should not be taken to represent the views of CIHR, OHTN or the Ministry.

Deliberation about the problem

Dialogue participants were generally persuaded, either by their own experiences or by the available research evidence, that many Ontarians with HIV struggle to find and maintain appropriate, stable housing. They also agreed that housing challenges affect the health and well-being of people with HIV, as well as their access to healthcare services. Differences of opinion tended to be about the uniqueness of the housing challenges faced by people with HIV compared to, for example, people with hepatitis C, addiction, and select other conditions. Some of the potentially unique housing issues confronting people with HIV are: 1) the stigma associated with HIV and its implications for disclosure of HIV status to those who can provide healthcare, housing and other forms of care and support; 2) the access to healthcare and adherence to treatment that can be enabled by stable housing and their implications for living well with HIV; and 3) the realities and uncertainties associated with living with HIV and being treated with powerful medications that cause or could cause significant side-effects, and their implications for fluctuations in the factors that influence housing stability.

Abstract

This article is part of a series written for people responsible for making decisions about health policies and programmes and for those who support these decision makers.

Policy dialogues allow research evidence to be considered together with the views, experiences and tacit knowledge of those who will be involved in, or affected by, future decisions about a high-priority issue. Increasing interest in the use of policy dialogues has been fuelled by a number of factors: 1. The recognition of the need for locally contextualised 'decision support' for policymakers and other stakeholders 2. The recognition that research evidence is only one input into the decision-making processes of policymakers and other stakeholders 3. The recognition that many stakeholders can add significant value to these processes, and 4. The recognition that many stakeholders can take action to address high-priority issues, and not just policymakers. In this article, we suggest questions to guide those organising and using policy dialogues to support evidence-informed policymaking. These are: 1. Does the dialogue address a high-priority issue? 2. Does the dialogue provide opportunities to discuss the problem, options to address the problem, and key implementation considerations? 3. Is the dialogue informed by a pre-circulated policy brief and by a discussion about the full range of factors that can influence the policymaking process? 4. Does the dialogue ensure fair representation among those who will be involved in, or affected by, future decisions related to the issue? 5. Does the dialogue engage a facilitator, follow a rule about not attributing comments to individuals, and not aim for consensus? 6. Are outputs produced and follow-up activities undertaken to support action?

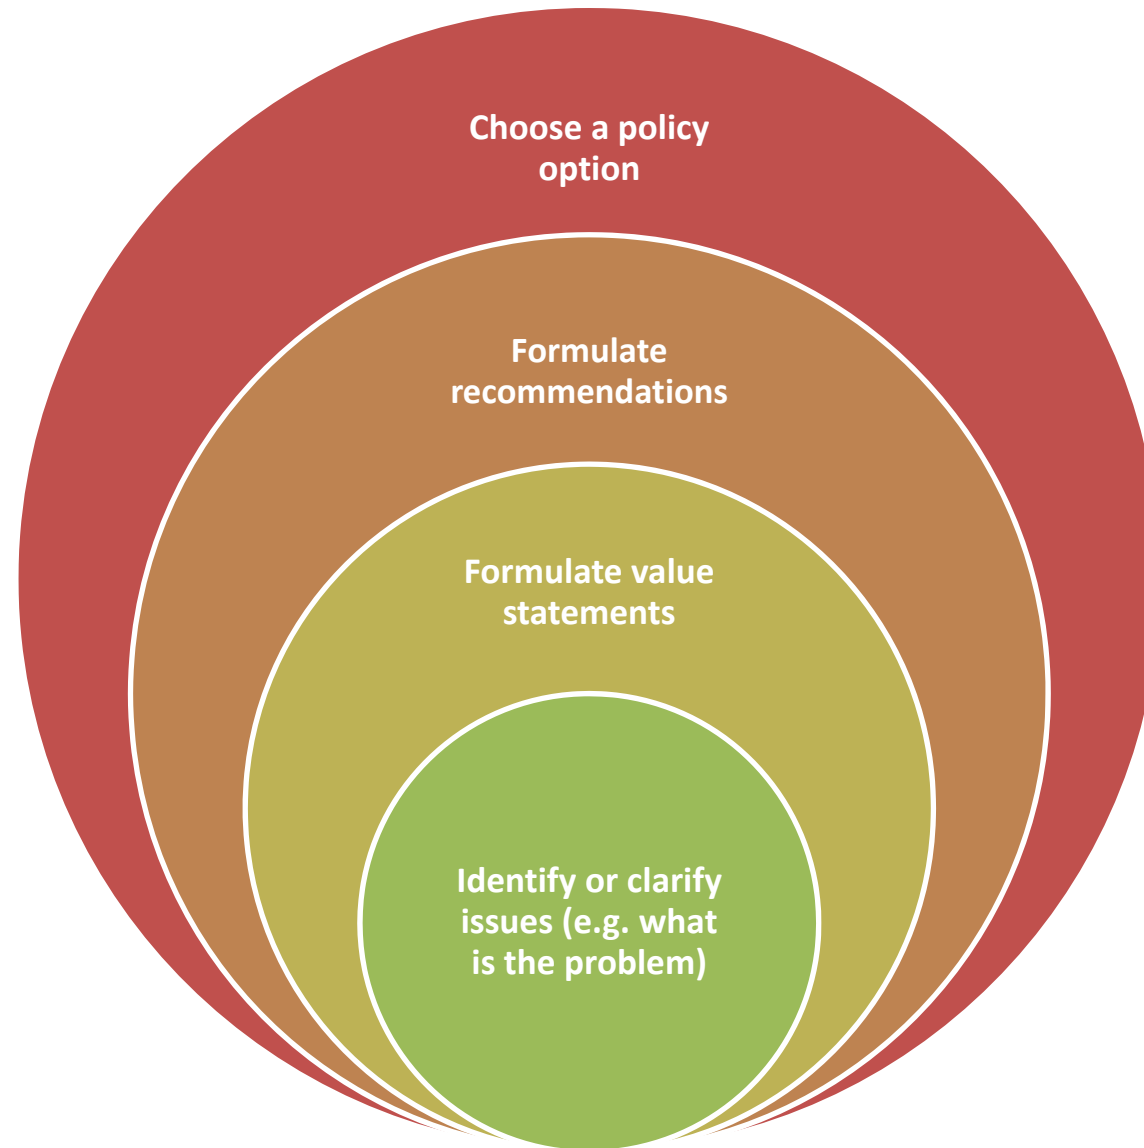

Part 2c

Deconstructing deliberative processes

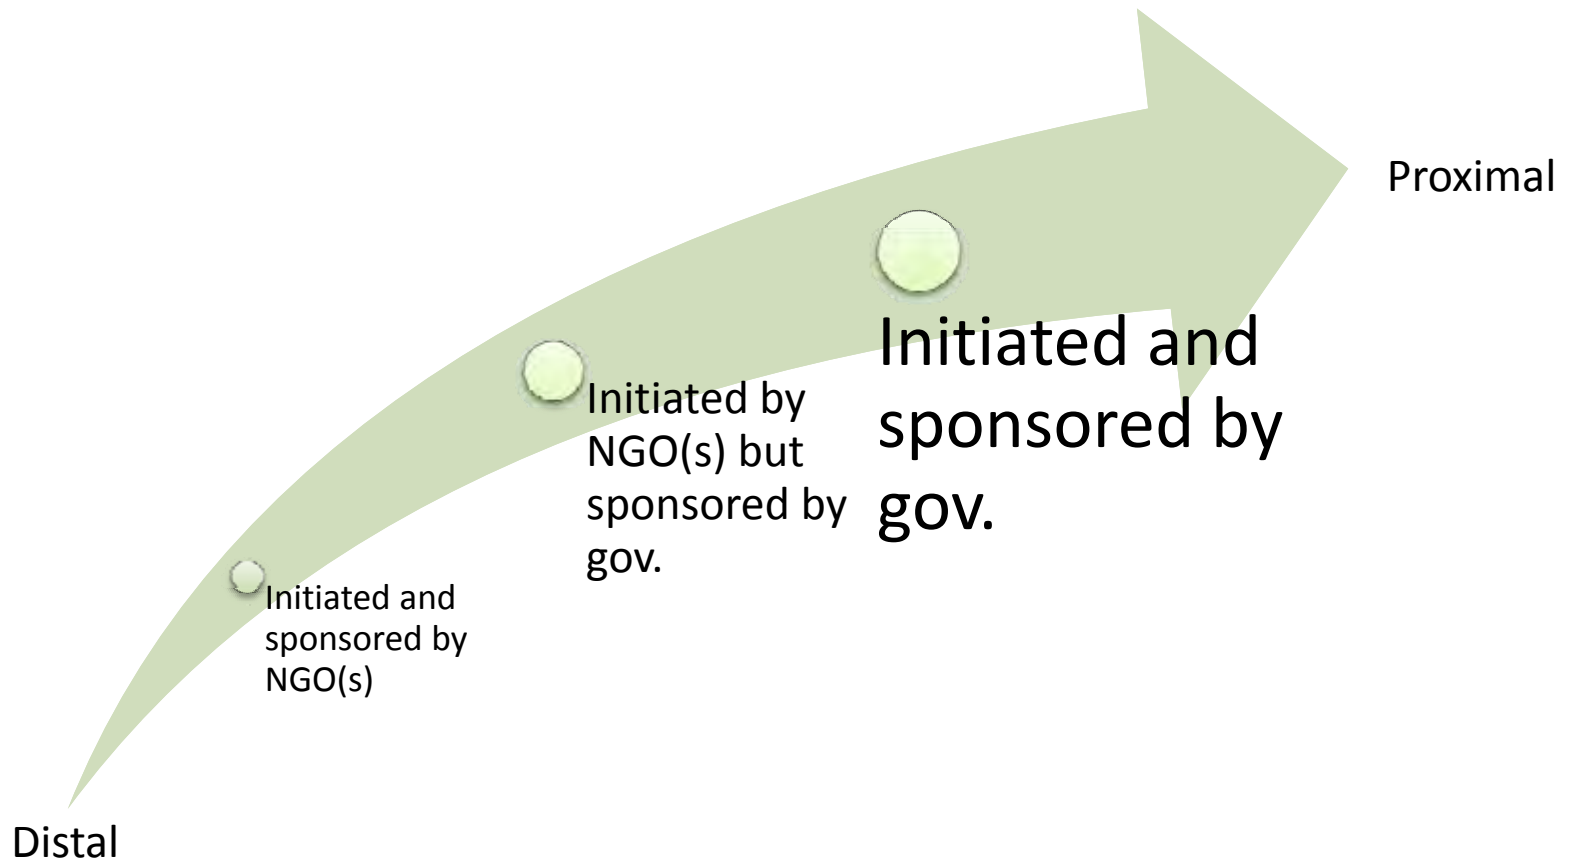

Five attributes of deliberative processes

1. What is the expected outcome?
2. What is the policy-making proximity?
3. When is it used in the policy-making process?
4. What is the degree of inclusiveness?
5. Who deliberates?

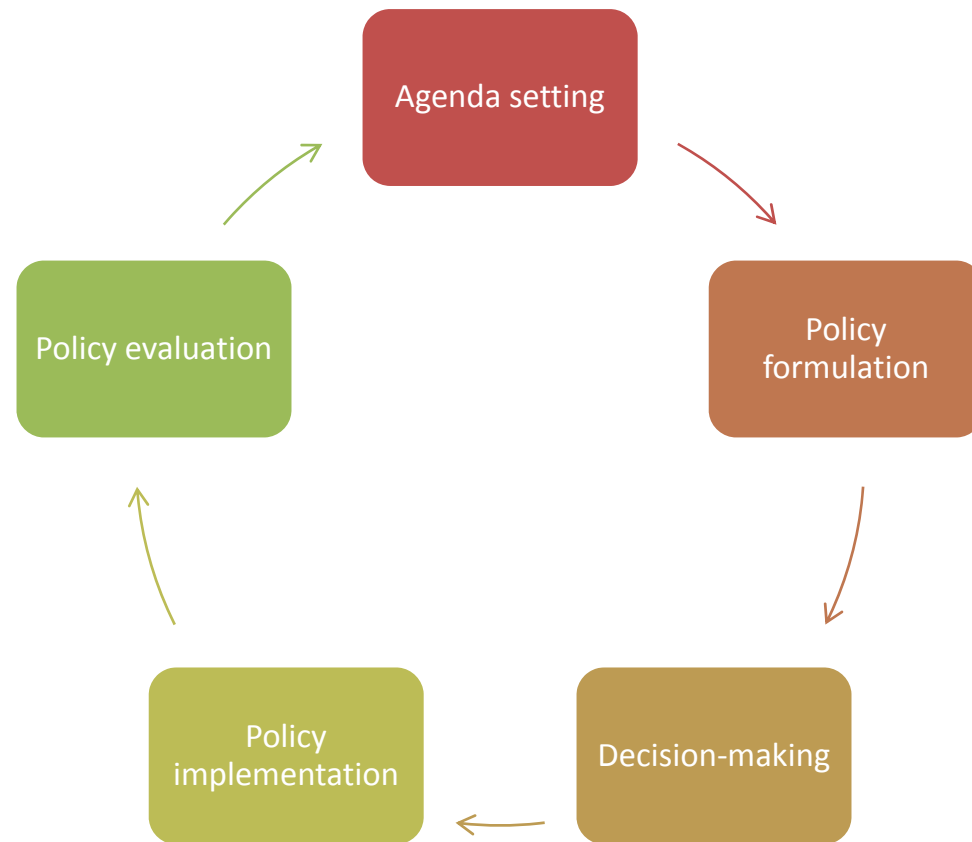

What is the expected outcome?

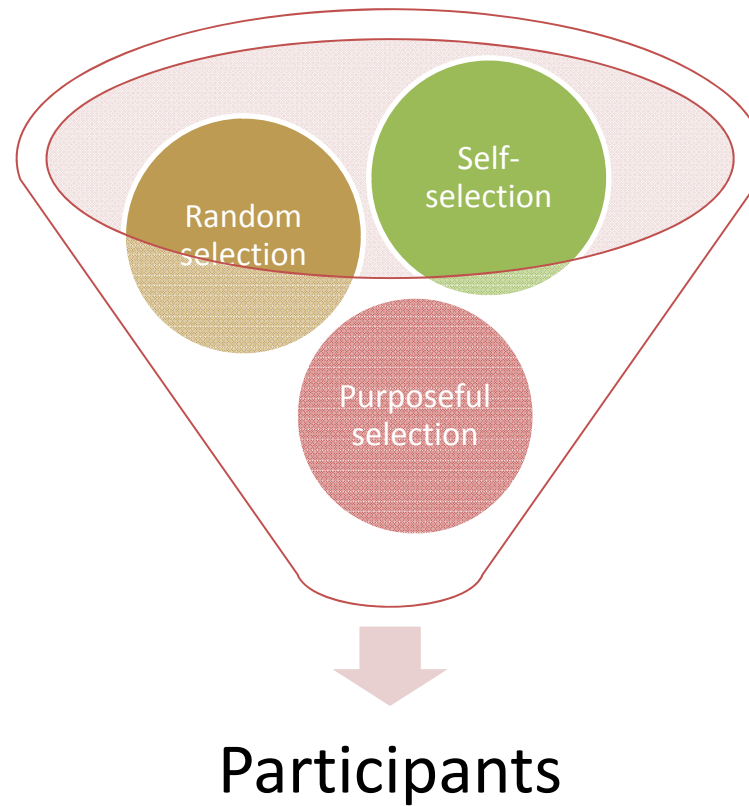

What is the policy-making proximity?

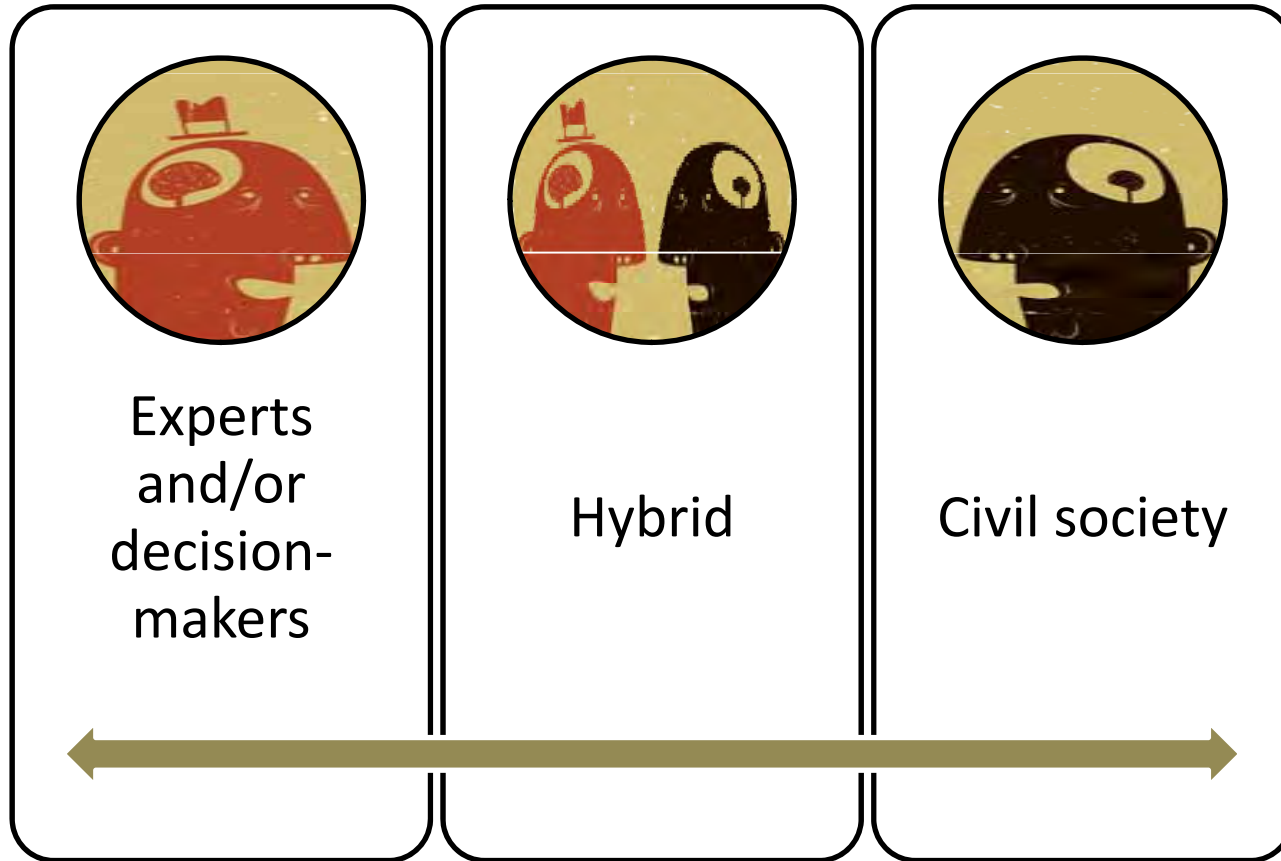

When is it used in the policy-making process?

What is the degree of inclusiveness?

Who deliberates?

INM's Strategic Meeting on Health	Formulate recommendations	Initiated by NGO	Agenda-setting	Civil society	Self-selection
McMaster Health Forum's Stakeholder Dialogue on Housing and HIV/AIDS	Identify and clarify issues	Initiated by NGO, but sponsored by gov.	Policy Formulation	Hybrid	Purposeful selection

Part 3

A deliberative process leads to better policy-making...
or does it?!

“A deliberative process leads
to better policy-making.”

10 minutes to identify up to 3 arguments **FOR** or **AGAINST**

“A deliberative process leads to better policy-making.”

FOR	AGAINST
<ul style="list-style-type: none">-Buy-in from public-Diversity of opinion-It's better.....-Engages the community-Inclusive-Right to expression-Contributes to policy (e-i)-Good will of gov't-Transparency-Equity-Education /understanding-Talk about values (forum)	<ul style="list-style-type: none">-Stalling tactic-Danger of 'group-think'/hijacking by dominant opinion-Management of dissent-Veneer of engagement (downward cycle of perception of pol)-Self selection (who participates – special interests)-Long complex process - diffusion-Potential to conflict with evidence

“Is there any scientific evidence that deliberative processes actually work?

The short answer is **‘not much’**. A lot of the literature on deliberative processes in healthcare has been and continues to be advocacy rather than reports of the effectiveness of well-defined processes.”

- Culyer and Lomas, 2006

Deliberation is promising, but there is **no guarantee** that it will lead to better decisions...

Deliberative processes are promising, but...

1. Deliberation can be messy
2. Deliberation is driven by complex group dynamics (e.g. power, interests, facilitation, etc)
3. Certain conditions must be met to ensure effective deliberation...

Break

Part 4

Activity – Mapping an Issue

Dialogue mapping™

A facilitation process that creates a 'map' that captures and connects participants' comments as a dialogue unfolds

[www.cognexus.org]

Benefits of Dialogue Mapping™

- Each participant's contribution is heard and acknowledged in the map.
- Each participant can see how their comments relate to others.
- The shared display map shifts the dynamic of the group into a collaborative mode ... "What can we think and learn together."
- The map increases the group's *shared understanding* about the problem at hand, possible solutions, meaning issues, roles and responsibilities ... all of the key elements of a successful project.
- Since the map captures the thinking process of the group, anyone who was not at the meeting can be quickly brought up to speed by reviewing the map with them.

(Cognexus Institute, « Some Benefits of Dialogue Mapping »
Retrieved from <http://www.cognexus.org/id41.htm>. May, 2011)

Issue Mapping

- Often the first step in understanding the wickedness of a problem
- Dialogue mapping without facilitation

- Benefits
 - Allows us to see the various issues/stakeholders/solutions that are possible

Today's exercise

Rough example of an issue map we will do together

The scenario

A recent report by the public health unit reveals high numbers of citizens suffering from acute respiratory problems during the City's International Fireworks Festival.

The problem seems particularly alarming in the East Side, the poorest neighborhood of the City.

The Festival has been a tradition
for the past 25 years.

It is a very lucrative event that
employs hundreds of residents.

Many say that this event has put
the City on the map and boosted
the tourism industry.

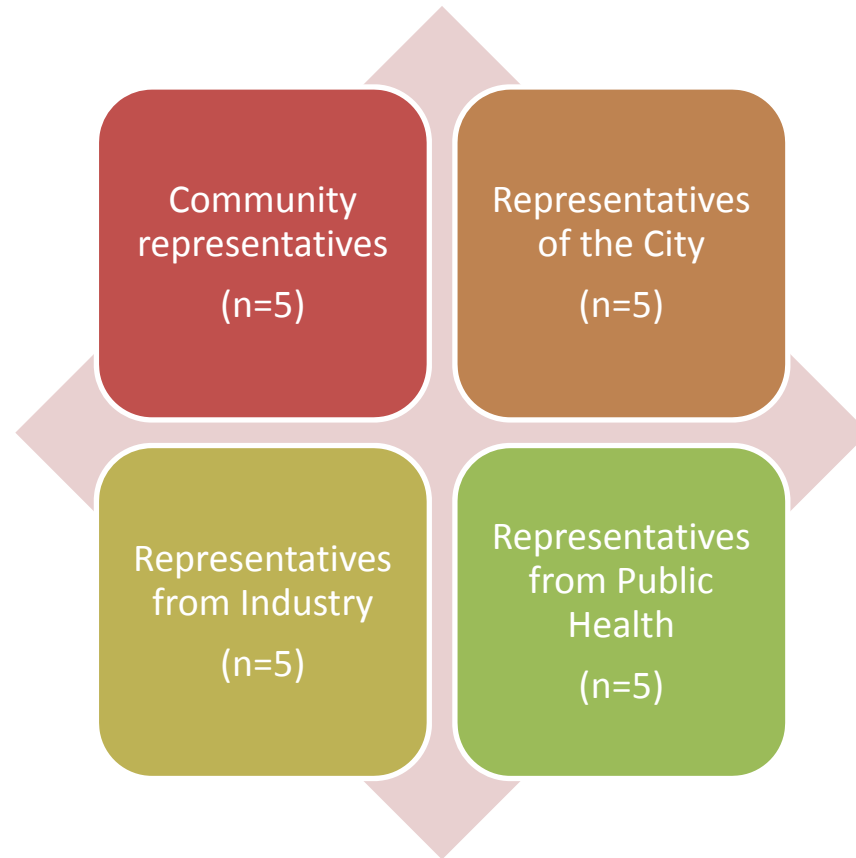

The City Council expressed concerns with the report, but is grappling with the problem and how to make a robust decision that will last.

The City Council has asked you, a group of stakeholders, to deliberate about the problem and explore potential solutions and their implications.

You are invited to... an issue mapping session!

We have assigned each of you a role...

What is our collective response to
the report?

Part 5

Conclusion and needs assessment

Deliberative processes are promising in terms of...

1. Developing a common understanding of a problem
2. Improving understanding of what works and in what context
3. Coming to agreement and stimulating action
